

Table: **Person**

+-----+-----+		
Column Name	Type	
+-----+-----+		
id	int	
email	varchar	
+-----+-----+		

id is the primary key column for this table.

Each row of this table contains an email. The emails will not contain uppercase letters.

Write an SQL query to **delete** all the duplicate emails, keeping only one unique email with the smallest id. Note that you are supposed to write a **DELETE** statement and not a **SELECT** one.

After running your script, the answer shown is the **Person** table. The driver will first compile and run your piece of code and then show the **Person** table. The final order of the **Person** table **does not matter**.

The query result format is in the following example.

Example 1:**

Input:

Person table:

+---+-----+-----+		
id	email	
+---+-----+-----+		
1	john@example.com	
2	bob@example.com	
3	john@example.com	
+---+-----+-----+		

Output:

+---+-----+-----+		
id	email	
+---+-----+-----+		
1	john@example.com	
2	bob@example.com	
+---+-----+-----+		

Explanation: john@example.com is repeated two times. We keep the row with the smallest Id =
