

Table: Employee

Column Name	Type
id	int
name	varchar
department	varchar
managerId	int

id is the primary key column for this table.

Each row of this table indicates the name of an employee, their department, and the id of the manager.

If managerId is null, then the employee does not have a manager.

No employee will be the manager of themselves.

Write an SQL query to report the managers with at least **five direct reports**.

Return the result table in **any order**.

The query result format is in the following example.

Example 1:**

Input:

Employee table:

id	name	department	managerId
101	John	A	None
102	Dan	A	101
103	James	A	101
104	Amy	A	101
105	Anne	A	101
106	Ron	B	101

Output:

name
John
